

Activity Name

In 2 to 3 sentences: the topic explored. What a facilitator would tell a colleague to get them interested in trying it.

AI topics addressed	AI exploration phase
Ex.: algorithmic bias, image recognition, training data...	1. Observation and Documentation / 2. Hypothesis Formulation / 3. Experimentation / 4. Practical Validation / 5. Discussions and Reflections / 6. Communication

Participants	Duration
min - max. Note if the min or max significantly affects the activity flow - Age range	Total session time

Facilitator prerequisites
What needs to be understood or practiced before facilitating - no false modesty, no overstatement

Description

EXPLORATION OBJECTIVES

What young people will have done, questioned or produced by the end of the session. Frame in terms of lived experience, not acquired competencies. Avoid abstract verbs: understand, grasp, raise awareness. Prefer: having handled, having debated, having produced, having noticed that...

HOOK AND PLAYFULNESS

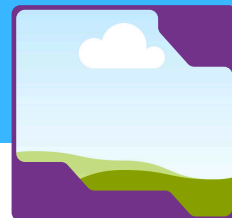

What makes the activity fun or exciting for young people. Not the learning objectives - what hooks them, what surprises them, what makes them want to participate.

RELEVANCE FOR YOUTH WORK

Youth workers and educators meet young people at a moment when identities are forming and futures are being imagined. Introducing AI in this context is not a neutral act: it is an opportunity to position young people as capable of understanding complex systems and contributing to debates that shape their world. AI is already present in their daily lives, in recommendations, filters, automated decisions, yet often remains invisible or misunderstood. This activity creates space to examine not just how these tools work, but who designed them, for whom, and with what values. The facilitator's role here combines scientific mediation and socio-cultural accompaniment: technical exploration and societal questioning reinforce each other rather than compete.

Activity-specific note related to youth commitment or particular relevance to local context

Applied ethics, critical thinking about technology, ability to debate complex issues

Preparation

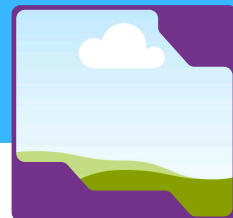

LIST OF MATERIAL

Item	Quantity	Notes
Item name	Per group or per person?	What isn't obvious: format, size, configuration, version
Item name	Per group or per person?	What isn't obvious: format, size, configuration, version
Item name	Per group or per person?	What isn't obvious: format, size, configuration, version
Item name	Per group or per person?	What isn't obvious: format, size, configuration, version

PREPARATION

Steps to complete before the session in chronological order. Include elements that seem obvious but caused problems during testing.

Estimated preparation time:

Step 1 - [Step title]

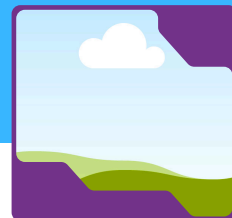

Estimated duration:

Step-by-step breakdown: what gets launched, how participants organise themselves, what the facilitator does in the meantime. Indicate whether the step is done individually, in pairs or as a whole group. Specify transitions: how to know the step is complete and it's time to move on.

Session Flow

Useful questions, comments and notes for the animator, educator or teacher

Provide additional information for the animator, questions that can be used for animating or closing the session, checking on indicators fulfilment, ensure participation ...

Step 2 - [Step title]

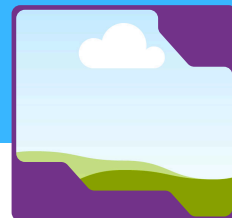

Estimated duration:

Step-by-step breakdown: what gets launched, how participants organise themselves, what the facilitator does in the meantime. Indicate whether the step is done individually, in pairs or as a whole group. Specify transitions: how to know the step is complete and it's time to move on.

Session Flow

Useful questions, comments and notes for the animator, educator or teacher

Provide additional information for the animator, questions that can be used for animating or closing the session, checking on indicators fulfilment, ensure participation ...

Step 3 - [Step title]

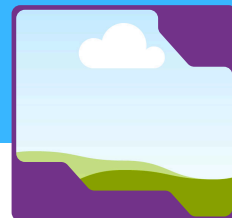

Estimated duration:

Step-by-step breakdown: what gets launched, how participants organise themselves, what the facilitator does in the meantime. Indicate whether the step is done individually, in pairs or as a whole group. Specify transitions: how to know the step is complete and it's time to move on.

Session Flow

Useful questions, comments and notes for the animator, educator or teacher

Provide additional information for the animator, questions that can be used for animating or closing the session, checking on indicators fulfilment, ensure participation ...

Step 4 - [Step title]

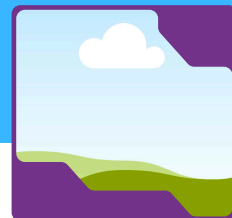

Estimated duration:

Step-by-step breakdown: what gets launched, how participants organise themselves, what the facilitator does in the meantime. Indicate whether the step is done individually, in pairs or as a whole group. Specify transitions: how to know the step is complete and it's time to move on.

Session Flow

Useful questions, comments and notes for the animator, educator or teacher

Provide additional information for the animator, questions that can be used for animating or closing the session, checking on indicators fulfilment, ensure participation ...

Step 5 - [Step title]

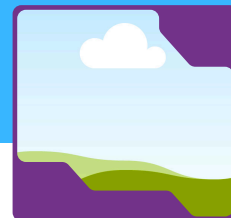

Estimated duration:

Step-by-step breakdown: what gets launched, how participants organise themselves, what the facilitator does in the meantime. Indicate whether the step is done individually, in pairs or as a whole group. Specify transitions: how to know the step is complete and it's time to move on.

Session Flow

Useful questions, comments and notes for the animator, educator or teacher

Provide additional information for the animator, questions that can be used for animating or closing the session, checking on indicators fulfilment, ensure participation ...

Conclusion and closing

Estimated duration:

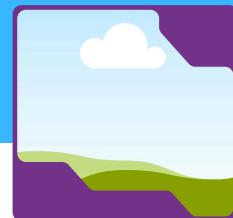

Group debrief. Note the recommended spatial arrangement if it matters. Possible questions - keep those that match what the activity actually provoked:

- « What surprised you? »
- « Did you change your mind about anything? »
- « If you had to explain what we did today to someone who wasn't here, what would you say? »

Session Flow

Useful questions, comments and notes for the animator, educator or teacher

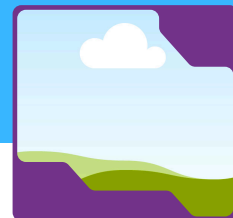

Provide additional information for the animator, questions that can be used for animating or closing the session, checking on indicators fulfilment, ensure participation ...

Watch Points

POTENTIAL RISKS IN SITUATIONS REQUIRING SPECIAL ATTENTION

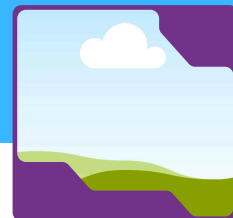

Situation	Adjustment
Ex.: the AI tool produces an unexpected or inappropriate result during the session	...
Ex.: young people reproduce AI responses without questioning them	...
Ex.: the group gets stuck on the technical aspects and loses sight of the exploration	...
Ex.: a young person takes AI output at face value and shuts down the debate	...
Ex.: internet connection is unstable or unavailable	...
Ex.: young people finish a step much faster than expected	...
Ex. inclusion: a young person doesn't speak the language of the activity	...
Ex. inclusion: the activity assumes a familiarity with digital tools that not all participants have	...
Ex. inclusion: the topic may resonate differently depending on participants' personal experiences	...
Ex. inclusion: a young person with a disability cannot access the tool in its standard form	...

Variations

ADVICE FOR TRANSFORMING THE ACTIVITY UNDER SPECIFIC CONDITIONS

If you have...	What changes	Specific materials	Watch points
Less time	What gets cut and how it affects young people's experience		
More time	What gets added and why		
A group of fewer than 8 participants	Organisational or dynamic adjustments		
A group of more than 20 participants	Organisational or dynamic adjustments		
A younger group	What changes in the instructions, materials or facilitation approach		
A group with no digital experience	Adaptations to avoid getting stuck on the tool		
No internet connection	Whether the activity can be fully or partially unplugged, and how		
An atypical space (outdoors, large hall, small room...)	How the spatial configuration affects the flow		

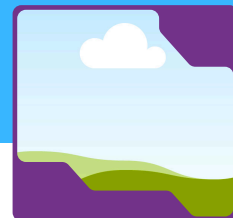

Success indicators

PREDEFINED DIMENSIONS

Dimension	Targeted	Concrete observable signs for this activity
Technology or engineering approached in a different way than usual	☐	...
Discovery of recent developments in technology	☐	...
Designing or making things with instruments young people do not normally have access to	☐	...
Better sense of what people working in technology or engineering actually do	☐	...
Better awareness of career paths in technology or engineering	☐	...
Artistic applications of technology explored	☐	...
Social applications of technology explored	☐	...

ACTIVITY-SPECIFIC INDICATORS

Indicator	Concrete observable signs for this activity
Define indicator #1	One sentence each, anchored in a behaviour or a phrase that could realistically be observed.
Define indicator #2	...
Define indicator #3	...

Facilitator Memo

BEFORE THE ACTIVITY

List of tasks	Done
ex.: AI tools or platforms have been tested on the equipment available on site	☐
ex.: Generated or used content has been reviewed	☐
ex.: A fallback plan exists if the AI tool doesn't respond as expected	☐
ex.: AI concepts used in the activity have been reviewed	☐

DURING THE ACTIVITY

List of tasks	Done
ex.: Don't correct a misconception about AI before the group has had time to question it themselves	☐
ex.: Welcome emotional reactions to AI (fascination, distrust, rejection) without dismissing them	☐
ex.: Note questions from young people that you can't answer	☐
ex.: Make sure young people interact with the AI, not just observe it	☐

AFTER THE ACTIVITY

List of tasks	Done
ex.: Document young people's productions if consent has been obtained	☐
ex.: Note the representations of AI expressed at the start and end of the session	☐
ex.: Record one or two notable reactions or quotes	☐

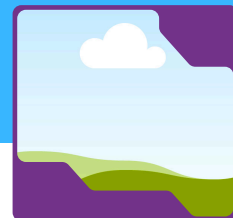

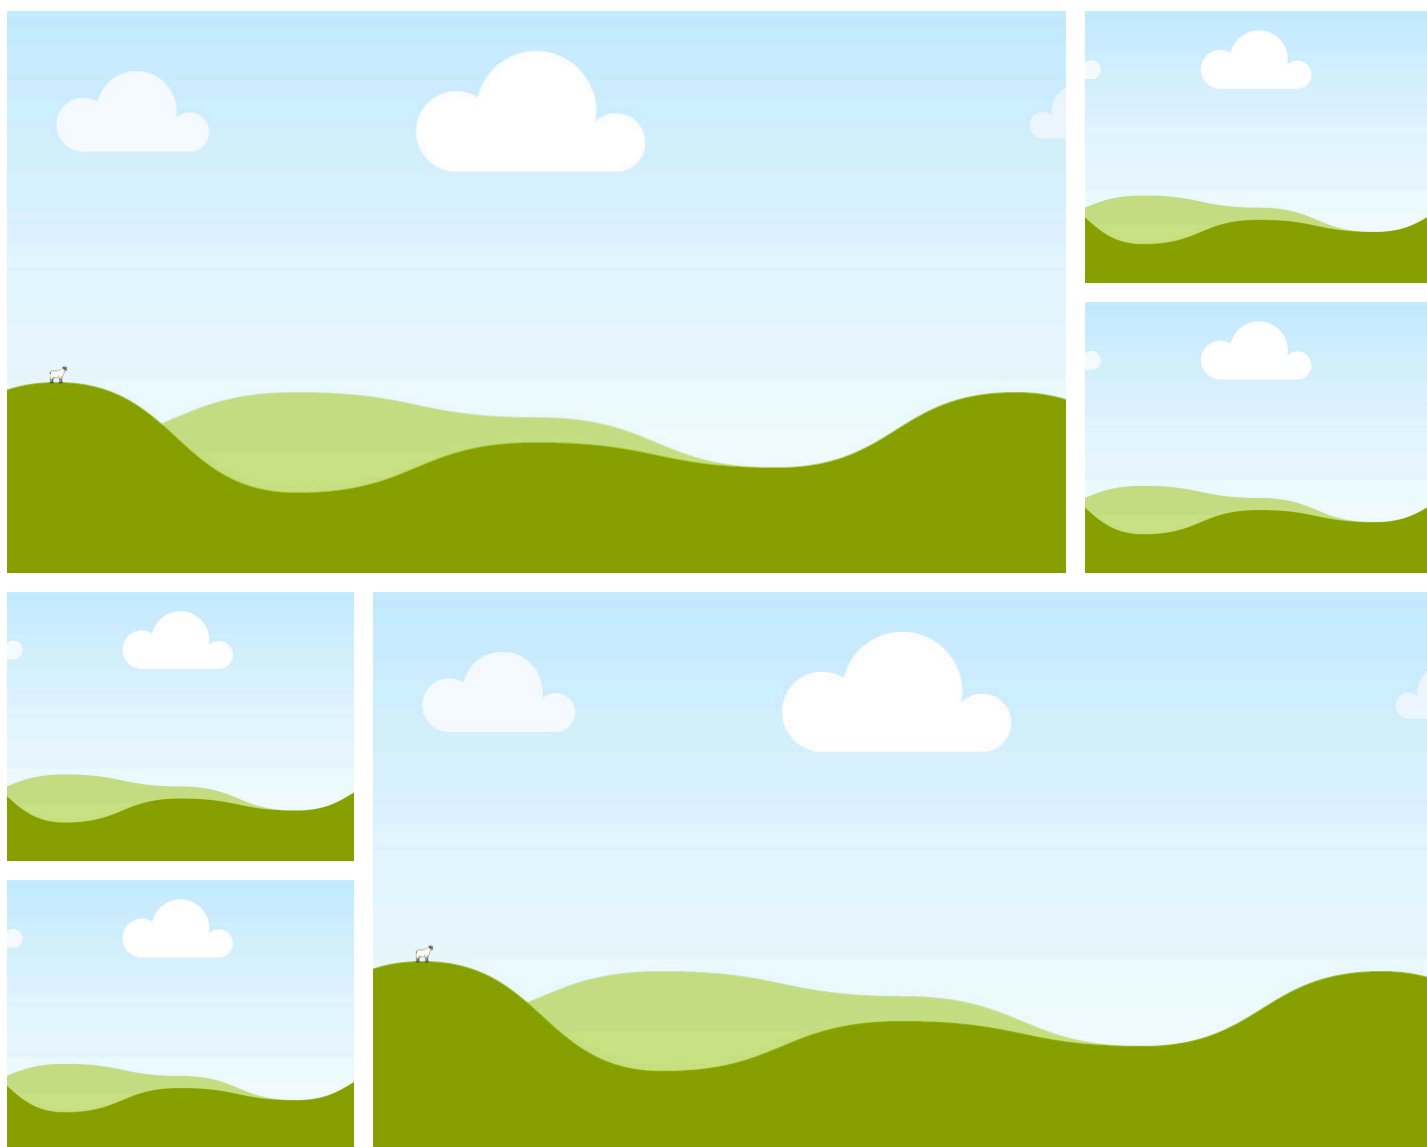

Illustration and Inspiration

Session Description

Location, date

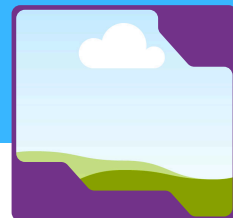

Description of the audience

Short description of the session organisation

Access report

Appendix n°

Description of the appendix

Specify appendix type, content and use such as: Reference documents on the AI topic covered: articles, videos, links. For the facilitator who wants to go deeper before the session, not for young people. Sheets, cards, handouts to distribute to participants during the session. Specify the recommended format (A4, A5, double-sided, one copy per person or per group). Slideshow or projected display used during the session. Specify at which step it is used and how. Work produced by real groups during test sessions: answers, creations, transcribed debates. Illustrates what output can be expected.
